

TREE TRANSPLANTING

M/s Big John, USA - world renowned manufacturers of Tree Transplanting Equipment together with Kam-Avida and its 20 years of experience in India, bring to you the Kam-Transplanter in models of varying tree truck carrying width capabilities, the 55 D, 65 D, 90 D and 100 D.

The felling of trees without the consent of the proscribed authorities in pre-designated areas is a Non-Bailable offence in India under the Indian Penal Code. This legislation comes as part of India's commitment to prevent Global Warming.

Ecological degradation versus Infrastructure Development has always been an either or issue and will continue to be so unless the infrastructure planners & developers take upon themselves the responsibility to maintain this balance in their quest for much needed development.

Our Transplanter is a boon to any such development project as it is a mobile chassis mounted equipment that enables one to transplant a fully grown mature and non-mature tree in the fastest and most effective way, with a 98 % success rate!

Our Transplanter may be used for the below applications:

- Land Development.
- Road Construction
- Green Field Projects.
- Plant/ Factory Expansion.
