01: NEWS FROM HQ

Recommended Nozzles for IVC Machines:

Industrial vacuum cleaning nozzles are required to be extremely efficient, reliable, resistant, long-lived, and comfortable to use.

A) Suction nozzle with Bleeder Valve –

Can be used in deep suction. Bleeder Valve will create a Ventura Effect and

help to suck the material more efficiently.

A) Cage Type

Nozzle –

Helps the hose from collapsing and makes the job easier.

B) Floor Nozzle –

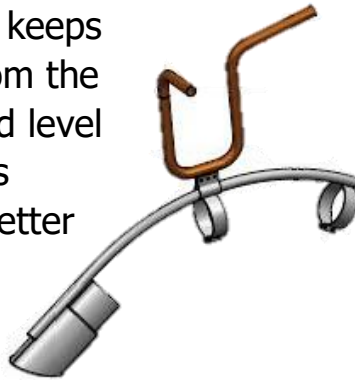

Wide mouthed mount. When there are no heaps and material is spilled on the floor, then this nozzle is ideal.

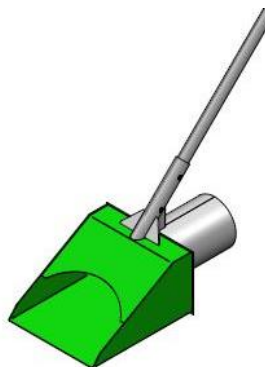

C) Pipe in Pipe Nozzle – This is like the Suction Nozzle with Bleeder; it helps Atmospheric Pressure come into the hose due to its pipe in pipe arrangement. This is used for not-so-deep suction.

D) Backbone Nozzle – keeps the operator away from the Hose. Used for ground level spillage suction. Helps operator to control, better grip.

E) Shovel Nozzle – when we have packed material, hardened spillage, cement or coal. Can use the edge as a shovel to break the hardened material.

02: EVENTS AT KAM-AVIDA

We restarted Operations as an Essential Service on 11th May 2020

with a lot of precautions. Thermal Reading, Social Distancing, Sanitisers galore and Virtual Meetings. KAEE is geared up to safely resume operations.

PPE Distribution in Chennai

500 Masks were handed out by our Mr. S Harikumar to the Sanitation workers at Chennai Water Supply and Sewerage Board.

03: MACHINES DISPATCHED

Machines dispatched in May – **2 NOS.**
